

QAble QuickAssure — Sales Playbook (India Market Only)

Audience: Sales team Scope: Domestic India functional/manual QA staff augmentation

Note: This pricing and structure applies only to the Indian domestic market — do not use for international/export client conversations, which run on a separate rate card.

What We're Selling

QAble QuickAssure: every account gets a dedicated functional QA engineer (execution) plus a shared senior QA lead (strategy, escalation, continuity). The client is told upfront the senior is shared across accounts — frame this as a strength, not a compromise: they get strategic oversight and a continuity safety net that a single direct hire could never give them.

Who This Is For

Good fit:

- Indian startups/SMEs without a dedicated technical recruiting function
- Teams that need functional, API, or cross-browser/cross-device testing coverage but don't want to manage hiring, backups, or QA process design themselves
- Founders/engineering leads who feel the pain of "if this person leaves, we're stuck"

Not the right conversation for this package:

- Large enterprise accounts wanting big dedicated automation programs — route to the core QAble team, different pricing track
 - Clients asking specifically for automation/SDET-only work — this bundle is functional/manual first
-

The Core Pitch

Don't lead with the price. Lead with the pain of hiring and the risk of relying on one person.

Talk track: "Hiring a QA engineer yourself means you own the recruiting time, the interview cycles, and the risk — if that person leaves or is out, you're stuck explaining your product to someone new from scratch. We give you two people for the effort of managing one: a dedicated tester who works as part of your team day to day, plus a senior QA lead who owns the testing strategy and keeps everything documented, so nothing is lost if anything changes. That's QuickAssure — quality you can trust, running from day one."

Qualifying Questions to Ask Early

- Do you currently have anyone in-house who can vet or manage a QA hire? (No → strong fit, hiring-hassle pitch lands hard)
 - Do you need someone to just execute test cases, or do you want input on who specifically joins the team? (Execution-only → Standard; wants input → Select)
 - Is this ongoing (3+ months) or a short one-off test cycle? (One-off → flag to manager, may not fit this bundle)
 - Any specific skill requirement (a particular domain, tool, or language)? (Yes → likely Select, sourced against their JD)
-

QuickAssure Standard — ₹90,000/month

Best for: Clients who want to start fast and are comfortable trusting QAble's assignment process.

What's included:

- A dedicated functional QA engineer, working as part of the client's team, 160 hours/month
- A senior QA lead overseeing strategy, methodology, and escalation — 20-30 hours/month
- Daily work summaries and testing summaries
- Full functional, API, and cross-browser/cross-device testing coverage
- Tesbo Test Management System + BetterBugs subscriptions included, no extra charge
- 30-day replacement guarantee if the engineer isn't the right fit

How to sell it: This is the fast-start option — no interview needed. Reframe "no interview" as a positive: "You're not trusting a resume, you're trusting a performance guarantee" — point to the defect-escape rate and on-time cycle completion SLA as the reason they don't need to personally vet anyone.

QuickAssure Select — ₹1,45,000-₹1,75,000/month

Best for: Clients who want direct input on who joins their team, or have a specific/niche requirement.

What's included:

- Everything in Standard, plus:
- Client interviews and selects from a shortlist of 2 pre-vetted, more experienced candidates

- Engineer sourced against the client's specific JD/requirements
- ₹1,45,000 — standard Select price
- ₹1,75,000 — added specialization (domain expertise, heavier API/cross-platform requirements, faster candidate turnaround)

How to sell it: Position as "you pick, we vet first" — every candidate presented has already cleared QAble's internal bar, so the client isn't doing blind interviewing, they're doing final selection between two strong, pre-qualified options. Good upsell path for a client who hesitates on Standard because they're nervous about not personally choosing the person.

Objection Handling

- **"Why can't I just hire someone myself for less?"** → Direct hiring means you own the recruiting time, the risk of a bad fit, and the risk of losing continuity if they leave. We remove all three, and you get a senior lead's strategic oversight thrown in — something a single hire never gives you.
 - **"Why is Select so much more than Standard?"** → You're getting a more experienced engineer and final say on who joins your team, instead of trusting our assignment. That's optional, not the default, and it costs more to deliver.
 - **"Can you go lower than ₹90,000?"** → Do not discount below tier floors without checking internally first. Escalate, don't quote on the spot.
 - **"What happens if the engineer isn't working out?"** → Standard: 30-day replacement guarantee. Select: a new shortlist can be requested per process guidelines — check with your manager on timing.
-

Contract Basics to Set Expectations On

- Minimum: 3-month commitment, auto-renews monthly after
 - Standard tier: engineer starts within [X] business days of signing
 - Select tier: billing starts once the client confirms a candidate from the shortlist
 - Annual rate increases of 8-10% are standard — mention this upfront during the sales conversation, not as a surprise at renewal
-

What Not to Do

- Don't discount below the tier floors without checking internally
- Don't promise senior attention beyond the stated 20-30 hours/month — overselling this creates delivery problems the account team then has to walk back

- Don't push Select as "the better option" by default — let the client self-select based on whether they value speed (Standard) or control (Select)
